# A how-to for the app interface with screenshots

User Signup:

This is where you sign up and become a member of our program, you need to give some key information about you, such as your name, email, phone number and password. All four inputs are mandatory, and you won't be allowed to register if you leave anyone black. After you click the "sign up" button, you will be taken to our homepage where you can log in using the email and password you provided.

User Login:

After you open our app, you should see two textboxes asking for your username and password. Type in your username and password, click log in button to log into your account. You won't be logged in if you are a user, but you select to log in as admin. An error message will tell you that. After you successfully log in, you should be able to see your enrolled events and a button where you can join another event.

User joins events:

After you click "Join an event" button, you should be able to see every event. By clicking the event you are interested in, you should be taken back to the user's homepage and you should see the new events shown up on your events list. And if you select an event which you enrolled already, the App will give you a message telling you "you have joined this event".

User leaves an event:

After users log in, they can select leave an event by clicking the event they are no longer interested in. And after that, they should see that event disappears from their my event lists.
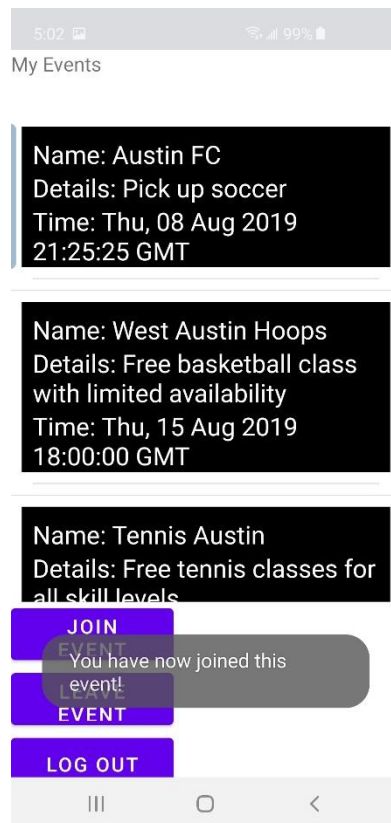

Admin login:

It is the same page whereas the difference is after admin type in username and password, they should tap LOG IN AS ADMIN button instead of LOG IN button that regular user uses.

Admin removes events:

There is a "manage events" button on the admin's homepage. After clicking that button, admin should see all events. By tapping event admin wants to remove, admin should be taken to its homepage with "event delete" message showing event has been successfully removed.
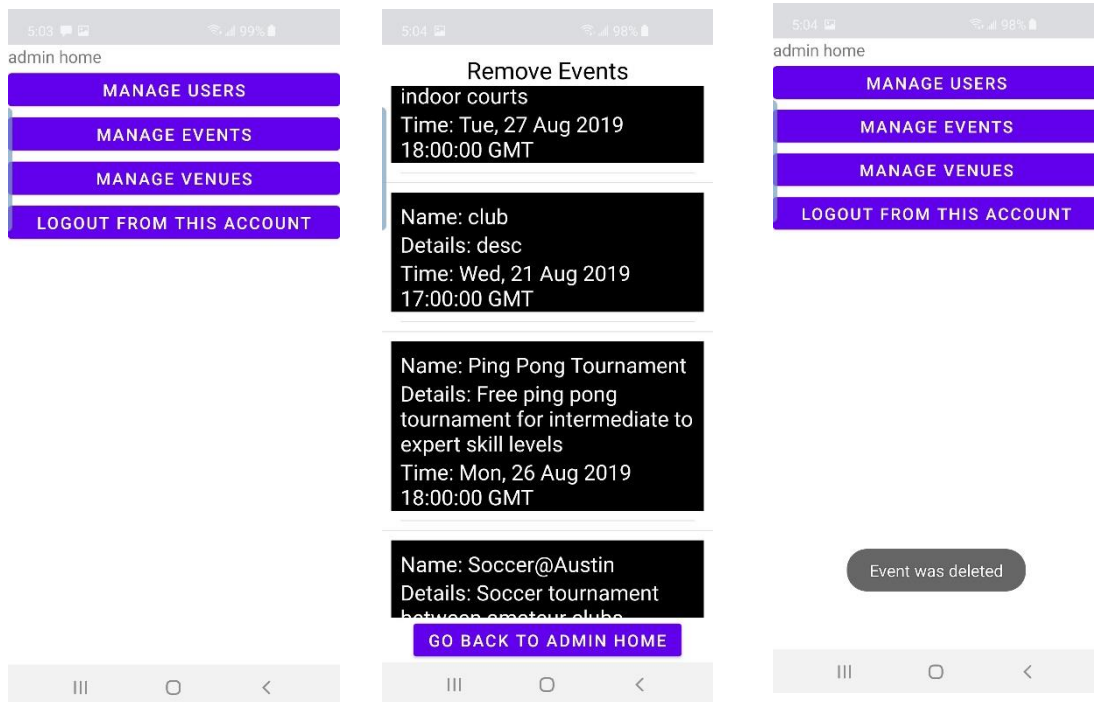

Admin removes a user:

This works in the same way as to remove events. After admin taps "manage users" button, admin can see all users and by selecting a user admin wants to remove, that user will be removed from the database and you will see it is gone from the user list.

Admin removes venues:

Removing venues are almost the same as removing users or events, admin can remove a venue by just tapping the venue block and a success message will pop up to show your operation is done.
